Internet Connectivity

Getting Connected at UGA

There are two ways to connect your devices to the Internet at the University of Georgia:

- Wireless networks
- Wired (Ethernet) network

What are the Wireless Networks?

For wireless connections, PAWS-Secure is available to anyone with a valid MyID. Visitors who want to use the guest wireless network, called Welcome to UGA, may contact the EITS Help Desk for an account and password. eduroam is another wireless network available on campus and at participating eduroam schools.

How Do I Connect to the Wired Network?

For wired (Ethernet) connections, students in the residence halls may connect their devices on their own via the self-service Device Registration Portal (DRP). Instructions are available on the Internet Connection Guide page.

Any one else who may want to connect their devices with a wired (Ethernet) connection must contact the Domain Network Liaison (DNL) for their building or department.
