Connecting Game Consoles

Connecting game consoles to the wired network

Gaming consoles are unable to connect to the wireless networks on campus, but wired connections are available in all the residence halls. Below are the steps to get connected with a wired connection/Ethernet cable:

1. Request a port activation. You will receive an email letting you know your port has been activated. Then you can proceed to the next step.
2. Find the Wired/LAN MAC address. You need this when you register the device on drp.uga.edu.
3. Register your gaming console on drp.uga.edu.
4. Connect the game console to the wall port using an Ethernet cord.

How to find your MAC address

PlayStation 4 MAC Address
Xbox One MAC Address
PlayStation 3 MAC Address
Wii MAC Address
