iPhone and iPod touch

Overview

This guide assumes that you have either a iPod Touch or iPhone running the 4.0 version of the iPhone OS. It will walk you through the configuration of PAWS-Secure.

Guide

- Get to the Home screen on your iPod Touch or iPhone. Find and tap on "Settings".
  - Once in "Settings", look at the very top for "Wi-Fi" and tap on it.
    - PAWS-Secure should be an available network. Tap on it.
Next, it will ask you to enter your UGA MyID.

After entering your UGA MyID, it will ask you to accept the security certificate (as shown below). You can view more details about the certificate if you would like by tapping "More Details". Click "Accept" to continue.
After accepting the certificate, you should now be connected to PAWS-Secure.
