What is PAWS-Secure?

PAWS-Secure is the University of Georgia's preferred wireless network. It is available throughout campus in classrooms, residence halls, offices, greenspaces and numerous buildings. PAWS-Secure is available to anyone with a valid UGA MyID, such as students, faculty and staff.

People who don't have a valid UGA MyID, such as campus visitors and guests, may use the "Welcome to UGA" guest wireless network. Contact the EITS Help Desk to get a temporary guest account to "Welcome to UGA."

Another wireless network option is eduroam, which is available on campus and at other eduroam schools for UGA students, faculty and staff.
